Domino. Do more.

Product and packaging coding solutions

Everything needs a code; whether to comply with legislation, enhance your operational performance, embed your company's brand or simply to provide information. Domino's focus is to enable a diverse spread of market sectors to code what they need to, in the way they want to.

Our ever growing range of technologies makes it possible to code and mark products at every stage: directly onto products, or on primary, secondary or tertiary packaging.

In the range you'll find solutions that give you a choice of outputs based on what and where you want your codes to appear:

The samples in this brochure provide a quick overview of print capability. For more information speak to your local Domino representative who will be happy to advise you.

Standard font

Domino ink jets print high quality, high definition codes on a range of substrates.

Machine readable codes and other graphics

Machine readable codes including bar codes and 2D codes make automated tracking easier. Our printers even enable you to print these alongside human readable codes.

When paired with the capability to print graphics you can make codes part of the packaging design, enhancing your brand.

Special characters and freeform

If you need to cater for global markets our software lets you print international character sets and print orientations, giving you the flexibility you need.

A-Series duo twin jet

High speed and high volume ink jet printing enables you to print multiple lines of text.

Thermal ink jet

Our thermal ink jet produces a 600dpi high quality output at up to 300 metres per minute.

You can produce 1 and 2D codes, text and graphics on porous and non-porous substrates when used with Domino's fast drying inks.

Thermal transfer overprint

Thermal transfer overprint systems print clear, durable text and graphics onto flexible packaging. Print information and variable codes (including bar codes and graphics) on most flexible packaging materials including polypropylene, coated aluminium, papers, labels and Tyvek. Print resolution is 300dpi and the print area ranges from single character to 128mm x 1000mm.

Thermal transfer overprint – ribbon

Alternative ribbons introduce a wide range of colours, so you can choose the best one to complement the substrate and packaging design.

Scribing laser

Our scribing lasers give you a choice of power outputs, so you can select the most appropriate one for your specific application.

The output of the scribing laser is the highest quality. You can mark more elegantly serial numbers, batch codes, bar codes, 2D data matrix codes, real-time numbers, logos, graphics, or more complicated European and Asian characters.

Large character standard alphanumeric

Domino's large character ink jet codes are designed to meet all your outer case coding needs. Our technologies allow a diversity of large character codes to be printed, from standard alphanumeric on demand to digital, high definition solutions.

Domino is all about 'doing more'.

Our people share a distinctive attitude based on seeing new horizons.

It appeals to the belief we all have in the possibilities of curious exploration, or going further:

Our approach is apparent in the resourcefulness of our people in supporting customers, and in their willingness to embrace responsibility and do what's right.

The result is a company that delivers customer solutions that are better because they are more innovative at the customer interface and create more possibilities for you.

In everything, Domino do more.
